Description of Program/Major

Sociology is the social science that studies human groups and society. It explores the multiple influences that groups exert in our personal lives: friendships, marriages, families, work units, businesses, schools, neighborhoods, organizations, communities, churches and clubs, among others.

In addition, sociology analyzes how and why groups form, hold together, and sometimes break up. It seeks an accurate and scientific understanding of society and of social life.

Likewise, sociology explores the many social and cultural forces that operate throughout society— forces that form individual persons, shape their attitudes and behaviors, and determine social events.

Sociology students learn countless applied and practical ways to change and to improve human life. Through the study of society, students learn how to deal more effectively with others while developing their thinking, analytical, problem-solving, research and communication skills.
